

HANDS-ONLY CPR -

Full CPR (compressions and rescue breaths) is most effective for instances of drowning or for children; however, if a lay responder is unable or unwilling to provide rescue breaths with CPR, compression-only CPR (compressions and no breaths) should be performed.

1 CHECK and CALL

1. **CHECK** the scene for safety, then **CHECK** the person.
2. Shout to get the person's attention. If the person does not respond, tap the person's shoulder and shout again while checking for normal breathing for 5 to 10 seconds.
3. If the person does not respond and is not breathing normally, **CALL 9-1-1** and continue to step 2.

2 GIVE CHEST COMPRESSIONS

1. Place the heel of one hand in the center of the person's chest.
2. Place the heel of the other hand on top of the first hand, lacing your fingers together.
3. Keeping your arms straight, position your shoulders directly over your hands.
4. Push hard and push fast!
 - Compress at least 2 inches.
 - Compress 100–120 times per minute.
 - Let the chest completely rise before pushing down again.

3 DO NOT STOP

Continue chest compressions except in one of these situations:

- You notice an obvious sign of life.
- If other responders arrive and take over (if two responders are available take turns giving compressions switching every two minutes).
- You are alone and too tired to continue.
- An AED is ready to use.
- The scene becomes unsafe.

TIPS

- When possible, use latex-free disposable gloves when giving care.
- Occasional gasps are not normal breathing.
- Use the speaker mode of a mobile phone to alert emergency responders while giving care.

AED (AUTOMATED EXTERNAL DEFIBRILLATOR)

1. Turn on AED and follow the audio prompts.
2. **Remove clothing from chest** and wipe chest dry if needed.
3. Attach the pads as shown on the package or AED.
4. Plug in connector, if necessary.
5. Make sure no one is touching the person then push the "Analyze" button, if necessary.
6. If a shock is advised, push the "Shock" button making sure no one is touching the person.
7. Perform compressions and follow AED prompts.
